

Expansion of the bicycle parking area at the campus of Poznan University of Technology

2006

 **University**
Poznan University of Technology
Country
Poland

Location 
Urban centre

Size 
20,000-30,000

Mobility Organizational Structure 
None

Summary

Additional public bicycle spaces have been created (bicycle racks and stands) in the area. Bicycle cages, accessible through using the electronic student ID card or employee card, have been created at the University campus. Access to the urban bicycle infrastructures located within the campus of Poznan University of Technology has been provided.

Aims

At least 1200 bicycle parking spaces by the year of 2019.

Stakeholders

- Poznan University of Technology (including students & staff).
- Poznan Municipality.

Background

Not available.

Expansion of the bicycle parking area at the campus of Poznan University of Technology

2006

Description

The project implementation is carried out on the grounds of the existing plans for infrastructure development. These plans could be modified during the project implementation. The project is based on the constant monitoring of the occupancy of parking space and consultations with the students' council and municipality authorities in the framework of existing transport infrastructures (e.g. urban bike). All activities are implemented in the main campus of the Technical University of Poznan because there are plans to move the whole University to this campus. There is also an urban bike rental service at the campus area, provided by Poznan municipality authorities.

Indicators

Number of bicycle parking spaces.

Results

About 800 bicycle parking spaces (including 315 covered and closed parking spaces with controlled access) were created before December 2016.

Expense

Not available.

Financing

The expenses are met internally by Poznan University of Technology.

 Findings

Current monitoring of the bike racks and bicycle parking space usage, and cooperation with municipal authorities in the field of connecting the University campus with urban transport infrastructure are crucial activities. They are especially important in the case of cities such as Poznan, which intensively develops the bike infrastructure and promotes this mode of transport in order to increase the attraction of travelling by bicycle in the city.
